

Taking Measurements:

There are many ways to measure for a door replacement, but Elixir recommends you measure your rough opening and select the replacement size which is closest to it.

For example, your rough opening measures 32-1/4" x 76-1/4". ALWAYS BACK DOWN TO THE NEAREST SIZE and order size 32" x 76".

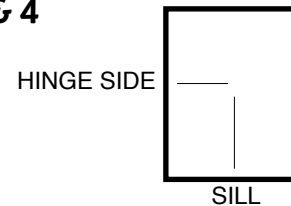

To determine if your door is right or lefthanded, simply look at it from the outside of the home to see which side the hinges are on.

Installing the Door:

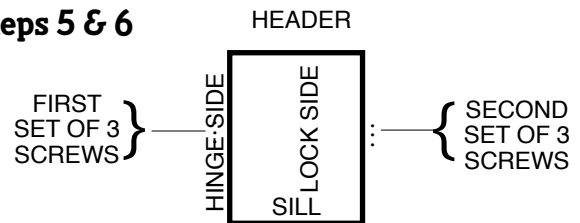

1. Make certain all mounting surfaces (siding seams included) are securely fastened and flat around perimeter of door opening.
2. Apply a suitable non-hardening sealant tape (such as Elixir 10-B Mobile Seal) to the backside of the door's mounting flange.
3. Do not remove any shipping clips or fasteners and keep the door closed and locked during the installation. Opening the door prior to the installation will destroy the pre-squaring by the manufacturer.
4. Insert the door assembly carefully into the rough opening. Make certain the door sill is secure on the floor. Move door to hinge side until it is firmly against hinge side stud.
5. Proceed to fasten door with screws. Drive the first 3 screws into the outer frame in the middle at the hinge side. Then, drive the next 3 screws in the middle of the outer frame on the lock side. Then, secure the balance of the hinge side, across the sill, up the lock side and the header.
6. Remove the shipping clips and open the door. Install the appropriate hardware.
7. If it is a house-type door with storm door, make certain 2 long screws are put through the storm door plunger bracket fastened to the jamb. This is to anchor the bracket securely to your hinge side stud.
8. If the house-type inner door is secured to the outer frame with butt type hinges (steel six-panel door only), run one long screw through each hinge on the jamb side to penetrate the hinge side stud.
9. The house-type door has an adjustable stop. Adjust the stop to the exterior of the inner door to insure a good seal.

If the above steps are followed, the door will be sealed and operate properly.

1-3/8" Interior Doors

Standard Doors:

Made using a patented process that produces a simulated, textured woodgrain for a durable surface that withstands vigorous handling and remains problem free. Now your homes can feature the lasting beauty and classic styling of wood that will easily coordinate with any decor.

Six-Panel Molded Doors:

These doors have the rich, warm look of wood and luxurious sculpted detailing that attracts home buyers and pays off in quicker, more profitable home sales. Rivaling the beauty of solid wood doors, they're more dense than natural wood and resist cracking, shrinking and swelling. Door facings are manufactured with high density fiberboard that is durable and affordable. In classic white or harvest oak. Uses non-mortise hinges.

	Standard		Six Panel Molded
